

Nightwatch

select and store movies

Danylo Denysov
Mitchell Leffers

Humans are often lazy and indecisive

App walkthrough-

Problem- Indecisive people will spend longer choosing a movie than watching it.

Solution- Build an app where all you have to do is select the genre of movie and the app will produce the top 5 movies for that genre.

But wait
there's more

This second to none app
will allow you to add any of
those movies to your own
personal list.

Need we say more?

Build Process

Challenges-

- Ironically making a decision
- Pre meditating the scope of the project
- Bit off more than we can chew
- Downgrading the scope and maintaining motivation whilst taking backwards steps
- Explaining the same process repetitively to Mitch

Least favourite parts- Mitch

- <= Why is this dot big!!! :(
- Realising I had no flippen idea what was going on and this bad boi should be finished in 4 hours.
- Feeling like I was not bringing much input into the actual implementation of the code.

Least favourite parts- Danylo

- Why is that guy OCD about dots? ↑
- Trimming the app because the time was underestimated
- Too darn many tipos!!!! <= (did you mean “typos”?)

Favourite parts- Mitch

- Discussing with Danny how many futures we can implement into the app, including Danny's dating.
- The first day I loved setting up trello and working on the README.md
- SUMMONING JANEL!!!

Favourite parts- Danylo

- Going through the code multiple times with Mitch was pretty good practice on how I can explain information better and check if I also have gaps in knowledge
- Big thank you to Mitch for documenting this whole process :)
- Loved being challenged

THE END!
